## [SRM]<sup>2</sup>

### STORMATRIX Remote Monitoring and Storage Resource Management

[SRM]<sup>2</sup> – STORMATRIX Remote Monitoring and Storage Resource Management – improves backup success rates and dramatically increases disaster recoverability through deployment of a hierarchical, remotely managed storage monitoring and analysis framework.

[SRM]<sup>2</sup> significantly augments existing backup and DR infrastructure by providing:

#### **Remote Hosting of Backup Catalogs**

- Secure and accessible off-site copies of up-to-date media content databases for use in the event of disk / server / site failure
- Automated collection, maintenance and remote staging of critical DR information (bootstrap records, backup configuration snapshots and system configuration histories)
- Centralized partition, application, and configuration version management for rapid rebuild and/or system redeployment in a DR situation

#### **Enhanced Reporting**

- Historical trend analysis of storage utilization on a per-system basis
  - Facilitates charge-back across the enterprise based upon resource consumption (disk/tape)
  - Clearly presents system growth trends over time to simplify capacity planning

- Simplified performance tuning and backup window management
- Trending of backup success rates over time
- Custom-tailored reporting options available

#### **Live Monitoring**

- Monitoring and screening of daily backup completion logs and event notifications by a team of seasoned backup professionals
- Individualized tracking and logging of per-client backup failure and event histories
- A consistent point of contact with account-dedicated engineers who are familiar with the software, hardware, configurations, and system histories specific to your unique environment
